EDUCATION

Georgia Institute of Technology, *B.S. Computer Science* | Graduated: May 2023 | GPA: 3.81/4.0

Skills & Technologies: Python, TypeScript, AWS (Lambda, ECS, DynamoDB, CloudWatch, Glue), Kubernetes/Docker, SQL/Postgres, Java, React, Node.js, NoSQL/MongoDB, Linux, Claude
Soft Skills: Problem-solving, attention to detail, verbal and written communication, teamwork, leadership, adaptability, time management, organizational skills

WORK EXPERIENCE:

Google | Software Engineer *May 2026 - Present*

- Google Ads, Authorized Buyers

Capital One | Senior Associate Software Engineer *August 2023 - April 2026*

- Engineered an enterprise-scale volunteer and grant platform for 1,000+ employees and 500+ non-profits, utilizing a Python-based collaborative filtering ML model to automate 200+ hours of matching workflows annually.
- Architected an AI-driven qualification platform using Python, Mistral 7B LLM, and Selenium, streamlining internal vetting processes through automated web scraping and LLM-based analysis.
- Created automated security infrastructure for mission-critical fintech applications (Escrow, Trade Services, ICS), implementing cross-account AWS migrations and secrets rotation to maintain 99.9% uptime.
- Developed the Decrypt and Stream Lambda (DASL) platform using Python for daily transaction files; co-led creation of a Typescript full-stack replay tool that allows downstream customers to recover 100% of failed transaction files.
- Eliminated significant manual overhead for operations teams by automating W9 rejection workflows and implementing refined validation logic within the Escrow self-service portal.
- Led vendor application onboarding using infrastructure automation and AWS Glue ETL pipelines, designing for scalability across 3+ enterprise-wide engineering teams.
- Established GitHub best practices across the organization, standardizing Conventional Commits across teams to enhance code quality, organization, and collaboration. These CI/CD checks are implemented enterprise-wide.

Goldman Sachs | Marcus Summer Analyst Intern *June 2022 - August 2022*

- Deployed an AWS scheduler that automates the start and stop of ECS instances, leveraging DynamoDB, AWS Lambda, and a Flask-based web framework, reducing AWS costs by 10% annually.
- Implemented monitoring and observability solutions, driving insights into cloud infrastructure performance.

KS Solutions LLC | Software Engineering Intern *April 2021 - August 2021*

- Developed an automated reporting solution using Java and SQL, generating on-demand PDF reports with uniform formatting, saving 10+ hours/week for the client that manually creates these reports.
- Enhanced user experience by implementing an autocomplete search function, improving efficiency and usability.
- Coordinated with business partners and tech team to ensure successful feature integration and launch.

PROJECTS:

Hit Your Macros (Python, Amazon Textract, Claude 4.0, Supabase, React Native) *December 2024 - Present*
A scalable full-stack nutrition intelligence platform, serving 100+ users to eat out while staying within their health goals.

- Architected scalable data pipeline using Amazon Textract and Claude 4.0, handling millions of restaurant menu items.
- Built optimized Supabase database with RESTful microservices, rate limiting, and monitoring capabilities for real-time location-based queries across thousands of restaurants.

ACHIEVEMENTS AND LEADERSHIP:

Board Member of Raas All-Stars | Non-Profit Organization *June 2023 - June 2025*
TDP and Bank Tech Council Lead | Capital One *August 2024 - June 2026*
Captain of Georgia Tech Ramblin' Raas | Collegiate Dance Team *May 2022 - May 2023*
Eagle Scout | Boy Scouts of America, Troop 1154, *Ashburn, VA* *March 5, 2019*
